NEC's Improved Live Scan Strengthens State and Local Law Enforcement

For law enforcement, processing arrests involves the entry of bio-demographic information, taking fingerprints and possibly mug shots of the suspect. The data is then sent to state and federal authorities, such as the FBI, to determine if there are any existing arrest records in order to verify that the suspect has not provided false information. Authorities also need to determine …

The 3 R's In Disaster Preparedness

Few want to be 'that person' … the one whose phone rings first when some aspect of the organization's critical infrastructure fails. Hoping for the best is all well and good. Even planning for the worst only goes so far. There are just too many variables in preventing unexpected outages to be totally failsafe. Yes, there are some situations that …
